

Dear Hiring Manager

I am excited to apply for the Software Engineer position at DeeL SE. As a skilled software engineer with experience in Python, Go, JavaScript, TypeScript, C++, MySQL, Postgresql, FastAPI, NodeJS, React, NoSQL, and Git, I believe my skills align well with the requirements of this role.

I co-founded Vector Education and served as Technical Department Head, leading the development and deployment of Vector, an innovative educational publishing app on Android and iOS platforms. As a Software Engineer at WispSwap Lab, I efficiently designed an off-chain system that enhanced data processing and scalability within the DeFi ecosystem.

In my previous roles, I have demonstrated expertise in maintaining legacy systems, upgrading codebases with solid principles, clean code practices, and design patterns while minimizing new code and achieving test coverage of over 95%. I have also mentored and trained new team members, including code reviews and on-the-job guidance.

As a Software Engineer at DeeL SE, I am excited to develop web, mobile, or cloud apps for a wide variety of customers while ensuring that my code is properly tested and documented. I am also eager to take care of code reviews for other members of the team while they review my contributions. I am confident that my experience with testing, test-driven development, and GitHub will be of big help in this role.

Thank you for considering my application. I look forward to the opportunity to discuss my qualifications and experience with you in more detail.

Sincerely,

Anthony Nguyen
